Glycogen phosphorylase (EC 2.4.1.1) [similarity] - Vibrio cholerae (strain N16961 ser) ClSpecies: Vibrio cholerae (5 Jac. 1970 cholerae) d. 18. Aug. 2000 #sequence_revision 20-Aug. 2000 #text_change 24-Aug. 2001 C. Accession: Ag. 1971 M.D.; Dodson, R. C. Clayton, R.A.; Gwinn, M.L.; Dodson, R. C. Hardelberg, J.F.; Eisen, J.A.; Neatherwan, J.; Bass, S.; Qin, H.; Dragoi, I.; Seller: I. R. R.; Mekalanos, J.J.; Venter, J.C.; Fraser, C.M.
Nature 406, 477-483, 2000
A.Title: DNA Sequence of both chromosomes of the cholera pathogen Vibrio cholerae. A; Reference number: A82035; MulD:20406833
A. Accession: A82511
A. Status: preliminary
A. Molecule type: DNA
A. Residues: 1 B17 chRis
A. Residues: 1 B17 chRis
A. Residues: 1 B17 chRis
A. Experimental source: Serogroup 01; strain N16961; biotype El Tor

ArTitle: Evidence for lateral gene transfer between Archaea and Bacteria from genome A. Reference number: A72200; MUD: 99287316
A. Reference number: A72200; MUD: 99287316
A. Status: preliminary
A. Mosedule type: DNA
A. Residues: 1-383 < ARN
A. Cross-references: GB. AE001737; GB. AE000512; NID: 94981144; PIDN: AAD35709.1; PID: 949.
A. Experimental source: strain MSH8
A. Gene: TM0625
C. Seperfamily: Thermotoga maritima hypothetical protein TM0625
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RNA helicase BH3348 [imported] - Bacillus halodurans (strain C-125)

C -1- DEVELOPMENTAL STAGE: AT STAGES 8 TO 9, EXPRESSED IN THE WHOLE LATERAL PLATE MESODERM AND PRECARDIGGENIC MESODERM. AT STAGE 10, EXPRESSED THROUGHOUT THE CARDIAC TUBE AND THE SINGS VENDSOS. BY STAGE 15, EXPRESSED HOWOGENOUSLY IN THE VENTIOUS REGION OF THE HEART, INCLUDING THE ATRIA, FUTURE LEFT VENTRICLE, BULBUS CORDIS C AND THE PRESSED THROUGH STAGE 20, BUT DECREASES THEREFIER. IN THE DEVELOPING LIMBS, FROM THE INITIATION OF THE BUDS (STAGES 16 TO 17), EXPRESSION ENCROPED STAGE 20, BUT DECREASES THEREFTER. IN SUDS SO THAT A GRADIENT EXPRESSION ALONG THE ANTERIOR OF THE LIMB BUDS SO THAT A GRADIENT EXPRESSION ALONG THE ANTERIOR POSTERIOR AXIS OF THE BUD IS ESTABLISHED WITH HIGHER EXPRESSION AT THE POSTERIOR BOYDER. AT LATER STAGES, EXPRESSION AT THE POSTERIOR BOYDER. AT LATER STAGES, EXPRESSION OF RECORDS IN THE AUTOPOD, DYNAMIC EXPRESSION OF HAND TO THE POSTERIOR AUTHERDIGITAL.

THE AUTOPOD, DYNAMIC EXPRESSION OF HANDS AFFECTS THE INTERDIGITAL PREVIOUSLY. THE LATERAL BORDERS OF THE DIGITS AND EVENTUALLY THE DEVENTORING VERWINDS AFFECTS THE INTERDIGITAL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. ARCH ARTERIES, AND IN PHARTYGEAL ARCHES, AS THE HEART LOOPS, THE EXPRESSION BECONES RESTRICTED TO THE CONOTRUNCUS AND FUTURE RIGHT VENTRILE (ENDOCARDIUM). AT 10.5 DPC, HIGHLY VENTRICLE (ENDOCARDIUM), AT 10.5 DPC, HIGHLY EXPRESSED IN THE BRANCHIAL ARCHES, AS WELL AS IN THE TRUNCUS ARTERIOSUS, AORTIC SAC, AND THE VASCULAR MESENCHYME BETWEEN THE THIRD AND FOUNTH AORTIC ARCH ARTERIES, WHICH LATER GIVES RISE TO VASCULAR SWOOTH MUSCLE CELLS AND TO THE MESENCHYME OF THE PHARTYNGEAL ARCH ON DAY 13.5 PC, BARELY DETCTABLE IN THE HEART, BUT APPARENT IN THE NEURAL SIMILAR TO THAT OF HANDI. IN THE DEVELOPING LIMES, EXPRESSION IS DETECTED IN THE POSTERIOR MESODERM OF THE BUOSA AT 9.5 DPC. IT IS THEN PROGRESSIVELY DOWN-REGULARD AT THE ANTERIOR OF THE LIME BUOSS OF THE BUDS SO THE LIME BUDS SO FLIME EXPRESSION ALONG THE ANTERIOR OF THE LIME BUDS SO THE BUD IS ESTABLISHED WITH HIGHER EXPRESSION AT THE POSTERIOR BUDS SO THE BUD IS ESTABLISHED WITH HIGHER EXPRESSION AT THE POSTERIOR BUDGOD. IN THE AUTOPOD, DYNAMIC EXPRESSION AT THE POSTERIOR AND TO THE POSTERIOR BUT RESIDENCY THE DUBLY SO THE DOSTERIOR BUT AUTOPOD, IN THE AUTOPOD, DYNAMIC EXPRESSION OF THE DISTABLE BURSHORY OF THE DEVELOPMENT, EXPRESSION ENTRY OF THE DUBLY SO THE POSTERIOR BUT ANTER DUBLY SO THE POSTERIOR AND TO THE POSTE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. "Point mutations in the transmembrane domain of DjlA, a
membrane-linked DnaJ-like protein, abolish its function in promoting
colaric acid production via the Rcs signal transduction pathway.";
Mol. Microbiol. 25:333-944(1997).

-!- FUNCTION: CHAPERONE THAT MAY PLAY A ROLE IN THE CORRECT ASSEMBLY,
ACTIVITY AND/OR MAINTENANCE OF A NUMBER OF MEMBRANE PROTEINS,
INCLUDING TWO-COMPONENT SIGNAL-TRANSDUCTION SYSTEMS. MIGHT CO-
OPERATE MITH DNAK TO ACTIVATE THE RCS TWO-COMPONENT SYSTEM.
-!- SUBCELLULAR LOCATION: Type III membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Kelley W.L., Georgopoulos C.; "Positive control of the two-component RusC/B signal transduction network by DilA: a member of the DnaJ family of molecular chaperones in Bscherichia coli."; Mol.
